# Service Discovery
—

- **Service Registration**
  and notify other services of the registered one

- **Service Discovery**
  searching for services?

- **Monitoring**
  is a service active and responding?

- **Load Balancing**
  direct traffic to the new service

How it works
—

- can act like a **DNS**
  simple usecase
  internal network

- can write / create **configs**
  more complex, but
  more control
